The 1799 Cents

It is recorded that 904,700 of these cents
ere minted - this is ridiculous as it would
hen compare in rarity to the 1798 which is
ery common, the '99 being the rarest date of
ll cents. It is probable that not more than
00 - 1000 were minted - or else they all disappeared
he cents of '99 are never found in uncirculated
condition altho there is one which makes such
laim; as a matter of fact the large majority of
he specimens found in collections are so much worn
s to cause doubt as to date and genuineness.
One fable states these cents were shipped to Africa in
heir entirety by a firm in Salem, Mass. Other stories
ay they were remelted to furnish copper to sheath
our frigates; Another, - the dies were unsatisfactory
and 1798 dies were still available and were used,
hen finally an 1799 die was made it was 1800, &
nly a few struck. This is a mystery cent and
f all our date & types (except 1793 Lib Cap)
ewer of these cents are found in fine condition
r better than any other. A much sought after,
xtremely hard coin to get in nice condition

1799 CENTS

← Date —	← Draped Bust →		Identifying features	Doughty	Sheldon	Rarity
Type	Perfect Date: Over 1798		No Die Defect.			
Type	Usually weak with liberty Strong	* Sharp except left lower	Obv 9 over 8			
Sharpness	Usually low with liberty low	Usually low.	Second 9 { lower loop joined to upper showing old 8 under.	137		8
Position	3/64" from curl	1/32" from curl				
1		Strong. Inclined to left.	Rev: Die Defect			
7		* Usually weak with date strong	ONE CENT { a small inclined pyramid, as shown between E and T. This is not a center dot.	138		7
** 9		Usually weak with lib. weak				
** 9		Usually weak with date weak				
LIBERTY		Bold & Sharp				
Fraction		Broad T				
STATES		O is low.				
OF		Not. Gen. Good. Shifts-causing weak in front of Bust				
CENT		Tiny triangular bet. E & T				
ONE		Usually well struck				
Border		Free of Die Breaks and defects except the one noted				
Defects		16 Leaves (Left) 19 Leaves (Right)				
Bust		Thick.				
Field		Perfect				
Wreath		Very faint with strong Date.				
Stems		long: Faint with strong Date.				
Bow						
Fraction Line						
Ribbon Ends						

*Note: The 1799 cent is not only very rare, but is very poorly struck and is not usually strong and sharp in all features. LIBERTY or Date is too close to border. Border is not wide enough to protect sharpness of Date or liberty; or fraction or TES of STATES. When LIBERTY is strong and well struck up the Date is usually weak and vice-versa. The same condition on the Rev. for the Fraction & States.

** The 9's are usually too close to border, and in majority of specimens the lower loops and knobs are very faint or missing entirely. A STRONG date on a 1799 is the most desirable feature

U. S. Large Cents

1799

Taken from Yeoman's 1947 Book. Note (1) lack of Border; (2) Closeness of date to edge, & weakness of lower portion. (3) Liberty also lightly struck. This is V.F. specimen, and by far better than those usually found in the collections of advanced collectors.

U. S. Large Cents

1799 over 98

Taken from Yeoman's Book 1947
Note closeness of date to border, weakness of bottom of date. Note LIBERTY strong. This is an extremely fine specimen:

Originally Priced $350.00 by Stack
from Sheldon Collection
Purchased from Stack 1948. An exceptional specimen. The die defect between E of ONE and T of CENT is very apparent. Obv: LIBERTY weakly struck, but date extremely strong! Rev; Fraction (opposite LIBERTY) weak remainder extremely sharp and well struck up. Pronounced genuine by Dr. Sheldon 3/16/48. Said he once owned this particular cent.

(1) Hines Collect. (Uncirculated - only one knob sold at Convention Auct. 1947 — 1500.00

(2) H.R. Lee Collect. (Fine) Bold Date; Rev. worn but legible. Sold Stacks Auct 1947 for — 55.00

(3) Grand Collect. (Very Fine) Perfect date and centering, Heavy mint dot on Rev. Dark Olive, choice cent. Sold Stacks Auct 1947 for $255.00

(4) Neil Collect. (Fine) knobs of 9's show; far above average usualy found - Max Mehl's Auct 1947 sold for 126.

(5) Ortz Collection - Very fine - ~~Sold~~ Priced at 350.00 by Stacks; sold for $300.00 vice Dr Sheldon.

(6) Allenburger Collection (Very fine) both 9's show knobs and well struck up. Perfect Centering; even dark olive surface; Sold at Max Mehl's Auction 1948 for

(7) Allenburger Collection (Strictly fine) Dark Olive, free from nicks and dents; Sold at Max Mehl Auction 1948 for.

(8) Oscar Pearl Collect. (Ex. fine) Original Crosby specimen. Probably one of four best known. Even dark steel surface. Priced at $900.00

The Cents of 1800

Records show that there were 2,822,175 minted; by far the record up to date, x being three times that of any other year so far. Why is the 1800 scarcer than 1798 – there were many more in 1800, perhaps some of them went the same way as the 1799 Doughty list one major type – "Draped Bust", and 17 varieties, over 1798, over 1799, over 179. There is a tendency for the reverse die's to break at the fraction.

XWA

Date on the Reverse: This appears about above "ATES". The point of the bust impression covers "OF" and passes under "ES"

The Cents of 1801

According to records 1,362,837 cents
were minted this year. The was but one
type - the "Draped Bust". The dies are
marked for their poor execution and many
errors, in legend & fraction. There are but
8 die varieties according to Doughty, and
all of which are fairly easy to distinguish
due to errors etc: Varieties occur $\frac{1}{000}$,
stem to wreath; II for U; $\frac{01}{000}$, $\frac{}{000}$,
over $\frac{1}{000}$; Wavy field, derided date, blunt &
perfect 1, separated fraction etc. An inter-
esting year from a variety stand point.
Some varieties are particularly hard to
come by in fine condition - the "three
errors" by example

The Cents of 1802

Records show that 3,435,100 cents were minted this year. The record to date. The 1802 cents are common in ordinary condition. There is but one type - the Draped Bust. There are, according to Doughty about 15 varieties. Some interesting varieties exist, such as the "Stemless Wreath"; $\frac{1}{000}$ fraction plus some interesting die breaks.

Overflowing Hair (Rare)

The Cents of 1803

Recorded number minted 2,421,353, hence common in ordinary condition. There is still but one major type - The Draped Bust. There are, according to Doughty 19 varieties; there is at least one more - the "large date - small fraction variety. Fractions existed large and small; dates - larger small; various die breaks, stemless wreath to fraction errror. "States" has a number of die breaks. The 1803's are becoming more popular to variety collectors. It probably ranks after the 1793 and 1794 series.

From Sheraton Col.

Brk. Obv: Used in 1804 Restrike.

Purchased from Sheraton 1948

Small Date - Large Fraction - Broken Obv.
Known as the "Scarred Neck" because of
Die Break mid-way between hair & throat.

The 1804 Cents

Number minted said to have been 756,838, but is obviously in error as they rarely turn up. A very rare date, the 2nd rarest in the large cents. The actual nomber minted was probably closer to 25,000 if that many; some guess as low as 5,000.

Only one type - the so called Draped Bust. Only one die was used, of which 3 states exist; perfect; broken obv; broken obv + rev: There also exists what is known as a mint restrike in which and 1803 altered date was used in combination with an 1816 rererse (Obv: D*196; Rev: New "G") both dies were worn and rusty. The restrike was made about 1860. It is realy not a restrike but a counterfeit. Dies are now destroyed.

In 1864 an uncirculated 1804 brought $32.00
In 1948 " " 1804 " $750.00

Counterfeits of the 1804 are numerous, and are usually 1801 altered date, or electrotypes. The specimens showing the obv. break only are the rarest of the 3 states.

The 1804 No. Doughty *198.

WΩO

From Sheraton Collection
Purchased from Sheridan 1947

Obv: The date is 4½ in lenghth; (thru center): The 1 has blunt top: other figures well formed; The stand of 4 on right is on line with crosslet. To right of crosslet are two short perpendicular lines. The "O" is exactly opposite the "O" in "OF" of the rev., a peculiarity occuring only in this cent.

Rev: 5 berries on each branch; A thin line 1/16" in lenghth extends obliquely upward from the top of the lowest leaf on the inside to the left branch – the one touching the C of CENT. Figures of fraction are large and well spaced.

From Yeoman's 1947 Book
Very fine – well centered and sharply struck. Appears a little weak around STATES.

RESTRIKE OF THE 1804 CENT

A fake 1804 was manufactured in the U. S. Mint by some employees of that institution about the year 1860 to satisfy the demand for this rare date. This piece is known as the "restrike" but fortunately for collectors it was a patchwork job and easily distinguished from a genuine 1804 cent. An old rusty die was used for the obverse which makes the field of the coin pitted and a die of about the year ~~1818~~, which is much different from an 1804, was used for the reverse. To aid collectors, an illustration of the 1804 restrike is shown here.

Rarity 6

The Small 1807 over 1806
Very Rare - From the Newcomb Collection
Purchased from Dr Wm H. Sheldon.
This particular variety was unknown to Doughty. It is easily recognized by the blunt 1 and the small 7 when compared to the large overdate which always comes with a perfect 1

The Cents of 1808

Records show that 1,109,000 cents were minted during this year. A decided change in design took place — the old Draped Bust, an artistic one, was dropped and a squat, unartistic, bust with a lot of hair banded with a ribbon reading LIBERTY — the date appeared below, and the head was flanked front & rear with 13 thick, fat and unartistic 6 pointed stars. The cent went from beauty to the beast until 1816 when it grew worst. After 1807 the cent collectors fell off sharply due I believe to just these fact. This new bust was called the Turban Head. Doughty lists 2 varieties for this year and Clapp 3. The two interesting ones are the 13 & 12 star (due to die defect) variety are the most interesting.

1808 CENT

EΩ

From the Col. Nicklan Col.
Purchased from Romano 1947

here is but one pair of dies for this year. he obv., on some authorities is an 1809 over 1808 - other's say no. Some say the recutting under the 9 is an 8. The 11th star has a defect, a NW ray - or a slight tail about 1/16" long. The Rev: is the same as 1808 Rev A(?) but is now found cracked from the border thru the letter 'T' in STATES; the crack then passing thru the tips of the highest pair of leaves. There is also a slight crack ~~about~~ above the letter 'T' in CENT. Very Scarce in good condition, usually found in very worn condition. In 1884 an uncirculated specimen sold for $20.50; in 1947 $200.00 The number minted is said to have been 222,867. Altered dates (1808) are common attempts to deceive the amature collector. A marked feature of the 1809 is a weakness of the border milling. The obverse is usually found in much poorer condition than the reverse. It is believed the obv. die was continued in use after being badly corroded.

The Cents of 1810

Records show that 1,458,500 cents were minted in this year. But one major type - the Turban Head continues. Doughty lists four die varieties, while Clapp lists five. The most important variety is the '10 over '09. The year can be termed uncommon.

— Overdate Variety —

The Cents of 1811

1. Records indicate that 218,025 cents were minted during this year. They are very scarce. Two Obv & Rev dies are known and only two varieties exist, the overdate and perfect date, the former of which is the rarer. Altered dates are common (from 1819 and 1841) to deceive the amateur. These alterations are clumsy and easily detected. This year is extremely difficult to obtain in Very Fine Condition or better. The 1811's are Dorshty 215 and 216.
